with you all the way

## SMART HEICS CONTROL BOARDS

The **Smart Hospital Boards** have been designed to work with the HEICS system, to enhance medical disaster preparedness and response. The **Smart Incident Command System** has proven effective when responding to MCI's all over the world. The **Smart Hospital Boards** allow this system to function in the hospital setting and improve accountability. When ordering ensure that you specify "Hospital Boards".

## SMART WMD CONTROL BOARDS

The **Smart WMD Control Boards** have been put together by respected experts from their real experience of HAZMAT response. These additional panels enhance the scene management of special incidents whether they originate from intentional or accidental release. When ordering ensure that you specify "WMD Boards".

## SMART DISPATCH PANELS

Included as standard in the **Smart Commander™**, the dispatch panels allow for secure storage of the **Smart Tag®** transport strips. These can be organised by destination hospital, severity of injury, or transporting agency. This improved audit ability ensures good patient trace and service accountability.
