

SMART TAPE™

enhancing scene management

Key Points:

- Fast and accurate triage for multiple age ranges
- Physiologically adapted triage flow charts
- Simple and easy to use
- Durable weatherproof material

The only evidence based system for triaging children

TJ Hodgetts, J Hall, I Maconochie, C Smart. Paediatric Triage Tape, Pre Hospital Immediate Care 1998.

Adult based assessment methods are not suitable for the triage of children. The stresses of an MCI and the emotional reaction to the presence of multiple injured children can make it easy to over prioritise child casualties beyond the seriousness of their condition and over that of potentially more critically injured adults.

The **SMART TAPE™** enables the rapid, safe and accurate triage of injured children at a multiple casualty scene.
